

SECURITY EXTENDED WITH AN ALARM FUNCTION

What's better than a secure lock? A secure lock with an alarm function.

As soon as you have activated the alarm tone on your lock, your lock is armed. If the lock experiences prolonged vibration, it will emit a 100 dB loud alarm signal. If you ever want to use your lock without the alarm function, a 5mm locking bolt made of specially hardened steel will secure your motorbike.

The ABUS "push down" cylinder is easy to operate and locks the bolt automatically.

In case you ever misplace the key, three keys are included in the scope of delivery. A CR2 battery is also included in the scope of delivery so that nothing stands in the way of immediate use.

Technologies

- 5 mm locking bolt
- The bolt, body and the structural parts of the locking mechanism are made of specially hardened steel
- Alarm function based on a vibration detection system
- Alarm of at least 100 dB
- An acoustic signal indicates the activity status
- Three keys are included in the scope of delivery
- One CR2 standard battery to supply the electronic unit is included in the scope of delivery

Operation and use

- Basic protection where there is a low theft risk
- Recommended for protecting lightweight motorbikes and scooters

Tips

275A yellow

Seite 2 von 2

- Disc brake locks are the most compact category of motorbike locks and are therefore easy to transport
- To increase the security during longer parking times, it is recommendable that you also secure the motorbike to a fixed object
